### Some notes about the map

This is a famous Portolan Chart known as  
"Carta Pisana" or "Carte Pisane", it's dated  
late 13th century. It was used as a tool  
of navigation by sailors and merchants  
in the middle ages.

In the same period of the T-O  
mappaemundi [http://classes.bnf.  
fr/ebstorf/feuille/to/index.htm](http://classes.bnf.fr/ebstorf/feuille/to/index.htm)  
(diagrammatic maps of the world),  
medieval people produced this kind  
of map.

We chose to show it because of its  
clear visual presentation and for the  
presence of a bar scale and of grids:  
these elements show a continuity  
between the cartography during the  
middle ages and the renaissance.

The essential pages about Portolan  
Charts are:

Campbell, T., 1987, 'Portolan Charts from  
the Late Thirteenth Century to 1500',  
in The History of Cartography. Vol. I.  
Cartography in Prehistoric, Ancient, and  
Medieval Europe and the Mediterranean,  
edited by J. B. Harley and D. Woodward,  
Chicago & London, The University of  
Chicago Press, pp. 371-463.

Leonardo Romei

There is a grid. Sailors probably used it to make calculation with the compass.

Probably a scale bar, very useful to understand the distance between different points of the coastline.

The name of the wind

The chart is oriented with the north on the upper side.

The map has two centers, from each center a compass rose with 16 directions.

North wind (Tramontana)

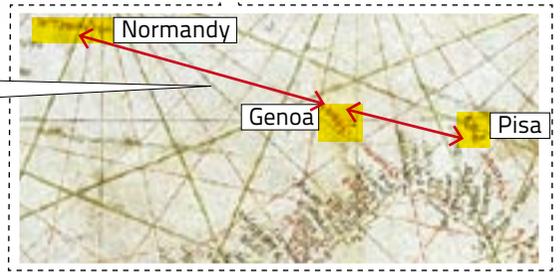

You can use all the reliable informations of the chart (distances, compass rose, scale bar) to navigate and to extrapolate informations as the best wind to follow to reach a certain harbor.

The colors of the toponyms are not random, in particular the most important alphanumeric informations are in red: big cities and winds.

32 winds, represented by lines in different colors, originally black, green, red.

The outline of the italian coast is probably created as the sum of all the distances and positions observed in the navigation. This chart represents, in some regards, italian peninsula, but just as a consequence of its primarily use: a tool of navigation.

This a navigational map and only the informations about the distance between cities of the coastline are reliable.

Toponyms, where the space is sufficient, are written from the coastline to right.
